Education

B.Th. Degree in Theology

Stellenbosch University - Stellenbosch, Western Cape

2014 to 2018

Matriculated at Rhodes High School

2006 to 2011

Skills

- Back end web developing (NodeJS, Express). (Less than 1 year)

- Front end web developing (HTML, CSS, and javascript) (Less than 1 year)

- Although being a capable front end developer, and currently having basic back-end skills and knowledge (as I am in the midst of learning at this point in time); what I enjoy most is the problem solving aspect of coding/programming. The process of having to think of a solution which leads to a desirable result is what I find quit rewarding. Hereby, I am always striving to improve upon my developing skills and expand my knowledge. In order to do so more efficiently and effectively. (1 year)

- Good communication and interpersonal abilities. As, part of my theology studies I've participated and engaged with a couple of NGOs' (namely: The Ark; and Legacy) whereby we (as a group of students) were required to develop and implement religious educational programmes that centred around faith development and educational guidance for youth. (4 years)

Additional Information

It should be noted that here is no section referencing 'past work experience' as I currently have none at this point in time.
